

Parlour POS Billing & Management System.

The system should be a modern, secure, user-friendly web-based application suitable for a small to medium-sized parlour.

1. Project Overview

Develop a centralized POS system that allows parlour staff and administrators to manage:

- Customer registration
- Services
- Products
- Staff / beauticians
- Appointments
- Billing and POS sales
- Payments
- Invoices
- Discounts
- Taxes
- Customer history
- Staff commissions
- Inventory
- Expenses
- Reports
- Dashboard
- User roles and permissions
- Settings

The system should reduce manual billing work and provide real-time information about sales, customers, inventory, staff performance and business performance.

2. Objectives

The main objectives are:

1. Create a fast and easy-to-use POS billing system.

2. Generate professional invoices/receipts.
 3. Manage parlour services and products.
 4. Maintain customer records and service history.
 5. Manage appointments and staff schedules.
 6. Track product inventory.
 7. Calculate discounts, taxes and final payable amounts automatically.
 8. Track staff commissions.
 9. Provide sales and business reports.
 10. Provide role-based access control.
 11. Maintain complete transaction history.
 12. Provide dashboard-based business insights.
-

3. User Roles

The system should support the following roles.

3.1 Super Admin

The Super Admin can:

- Manage all users
- Create/edit/delete services
- Create/edit/delete products
- Manage categories
- Manage staff
- Manage customers
- Manage appointments
- Manage billing
- Manage inventory
- Configure taxes
- Configure discounts
- View all reports
- Manage expenses
- Manage commissions
- Manage system settings
- Manage roles and permissions
- View audit logs

3.2 Manager

Manager permissions may include:

- Customer management
- Staff management
- Appointment management
- Billing
- Inventory
- Reports
- Expenses
- Sales monitoring

The Manager should not be able to modify critical system settings unless permitted.

3.3 Receptionist / Cashier

Receptionist/Cashier can:

- Register customers
- Create appointments
- Create bills
- Process payments
- Print/download invoices
- View customer history
- View available services
- View available products

They should not have access to sensitive administrative settings.

3.4 Beautician / Staff

Staff can:

- View assigned appointments
- View assigned customers
- Update service status
- View their completed services
- View commission information if permitted

4. Dashboard

Create an informative dashboard containing:

- Today's total sales
- Today's number of bills
- Today's appointments
- Today's customers
- Pending appointments
- Completed appointments
- Cancelled appointments
- Total products
- Low-stock products
- Total staff
- Today's expenses
- Today's profit estimate
- Monthly sales
- Monthly expenses
- Outstanding payments

Include graphical reports such as:

- Daily sales chart
 - Monthly sales chart
 - Service-wise sales
 - Product-wise sales
 - Staff-wise sales
 - Payment-method-wise sales
-

5. Customer Management

Create a complete Customer Management module.

Customer fields should include:

- Customer ID
- Customer name
- Mobile number
- Email
- Gender
- Date of birth
- Address
- Registration date
- Notes

- Customer status

The system should maintain:

- Customer profile
- Appointment history
- Service history
- Purchase history
- Billing history
- Payment history
- Total spending
- Last visit
- Preferred services
- Notes

Provide customer search by:

- Name
 - Mobile number
 - Customer ID
-

6. Service Management

Create a Service Management module.

Example categories:

- Hair
- Facial
- Makeup
- Skin Care
- Nail Care
- Spa
- Hair Treatment
- Bridal
- Groom
- Other Services

Each service should contain:

- Service ID
- Service name

- Category
- Description
- Duration
- Price
- Tax
- Discount
- Staff commission
- Status

Allow administrators to:

- Add service
 - Edit service
 - Delete/deactivate service
 - Search services
 - Filter by category
 - Set service price
 - Set service duration
 - Configure commission
-

7. Product Management

Create a Product Management module for products sold by the parlour.

Product fields:

- Product ID
- Product name
- SKU
- Barcode
- Category
- Brand
- Purchase price
- Selling price
- Tax
- Discount
- Current stock
- Minimum stock level
- Unit
- Supplier
- Status

Features:

- Add product
 - Edit product
 - Delete/deactivate product
 - Product search
 - Barcode search
 - Stock tracking
 - Low-stock alerts
 - Product sales history
-

8. Category Management

Allow administrators to create and manage:

- Service categories
- Product categories
- Expense categories

Functions:

- Add
 - Edit
 - Delete
 - Activate/deactivate
 - Search
-

9. Staff / Beautician Management

Staff fields:

- Staff ID
- Name
- Mobile number
- Email
- Gender
- Date of birth
- Address

- Joining date
- Designation
- Salary
- Commission type
- Commission percentage/fixed amount
- Working status
- Profile photo

The system should track:

- Assigned appointments
 - Completed services
 - Sales generated
 - Commission earned
 - Attendance, if included
 - Performance
-

10. Appointment Management

Create an appointment booking system.

Appointment fields:

- Appointment ID
- Customer
- Mobile number
- Service
- Staff/Beautician
- Date
- Start time
- End time
- Duration
- Status
- Notes

Appointment statuses:

- Pending
- Confirmed
- Checked In
- In Progress
- Completed

- Cancelled
- No Show

Features:

- Create appointment
- Reschedule appointment
- Cancel appointment
- Assign staff
- Calendar view
- Daily appointment list
- Weekly appointment view
- Appointment search
- Customer appointment history

Prevent double booking of the same staff member during overlapping time periods.

11. POS Billing Module

The POS screen should be the primary operational screen.

Design it for **fast billing with minimum clicks**.

The cashier should be able to:

1. Search/select customer.
2. Select services.
3. Select products.
4. Assign staff to services.
5. Adjust quantity.
6. Apply discount.
7. Apply tax.
8. Add custom charges if permitted.
9. Calculate subtotal.
10. Calculate discount.
11. Calculate tax.
12. Calculate grand total.
13. Select payment method.
14. Complete payment.
15. Generate invoice.
16. Print/download receipt.

The POS should support:

- Service billing
 - Product billing
 - Mixed service + product billing
 - Multiple quantities
 - Item-level discount
 - Bill-level discount
 - Tax
 - Rounding adjustment
 - Partial payment, if enabled
 - Multiple payment methods
 - Invoice printing
 - Invoice PDF
 - Reprint invoice
-

12. Billing Calculation

The system should automatically calculate:

Subtotal = Sum of all item prices × quantity

Discount Amount = Applicable discount

Taxable Amount = Subtotal – Discount

Tax Amount = Taxable Amount × Tax Rate

Grand Total = Taxable Amount + Tax Amount + Additional Charges

Support configurable:

- Percentage discount
- Fixed discount
- Item-wise discount
- Bill-wise discount
- Tax percentage
- Rounding

The system must clearly display:

- Subtotal
- Discount

- Taxable amount
 - Tax
 - Additional charges
 - Grand total
 - Amount paid
 - Balance/due
-

13. Payment Management

Support payment methods:

- Cash
- UPI
- Debit Card
- Credit Card
- Bank Transfer
- Other

For every transaction store:

- Payment ID
- Invoice ID
- Payment date
- Payment method
- Amount
- Transaction/reference number
- Payment status
- Received by

Allow multiple payment methods for a single bill if required.

Example:

₹1,000 bill:

- Cash: ₹400
- UPI: ₹600

Total payment = ₹1,000.

14. Invoice / Receipt

Generate professional invoices containing:

- Parlour logo
- Parlour name
- Address
- Mobile
- Email
- GSTIN, if applicable
- Invoice number
- Invoice date
- Customer details
- Staff details
- Services
- Products
- Quantity
- Rate
- Discount
- Tax
- Total
- Payment details
- Amount paid
- Balance
- Terms and conditions
- Thank-you message

Invoice actions:

- Print
- Download PDF
- Reprint
- View
- Email, if configured

15. Inventory Management

Inventory should automatically update when products are sold.

Features:

- Stock in
- Stock out
- Purchase entry
- Sales deduction
- Manual stock adjustment
- Damaged stock
- Returned stock
- Low-stock alert
- Stock history

Stock calculation:

Closing Stock = Opening Stock + Stock In – Stock Out ± Adjustments

Provide stock movement history for every product.

16. Supplier Management

Create Supplier Management.

Supplier fields:

- Supplier ID
- Supplier name
- Company
- Mobile
- Email
- Address
- GSTIN
- Notes

Features:

- Add supplier
 - Edit supplier
 - Delete/deactivate supplier
 - Purchase history
 - Supplier-wise purchases
-

17. Purchase Management

Allow staff to record product purchases.

Purchase fields:

- Purchase ID
- Supplier
- Invoice number
- Purchase date
- Product
- Quantity
- Purchase price
- Tax
- Discount
- Total amount
- Payment status

When a purchase is completed:

Product stock should automatically increase.

18. Expense Management

Create an Expense Management module.

Expense examples:

- Electricity
- Rent
- Salary
- Maintenance
- Cleaning
- Marketing
- Product purchase
- Miscellaneous

Expense fields:

- Expense ID
- Category

- Description
 - Amount
 - Date
 - Payment method
 - Reference number
 - Attachment
 - Added by
-

19. Staff Commission

Allow configurable commission rules.

Examples:

Percentage Based

Service price = ₹1,000

Commission = 10%

Staff commission = ₹100

Fixed Amount

Service price = ₹1,000

Staff commission = ₹150

Staff commission reports should show:

- Staff name
 - Service
 - Customer
 - Invoice
 - Service amount
 - Commission rate
 - Commission amount
 - Date
 - Payment status
-

20. Discount Management

Support:

- Percentage discount
- Fixed discount
- Service-specific discount
- Product-specific discount
- Customer-specific discount
- Promotional discount

Optional coupon functionality:

- Coupon code
 - Discount type
 - Discount value
 - Start date
 - End date
 - Minimum bill amount
 - Maximum discount
 - Usage limit
 - Active/inactive
-

21. Returns / Refunds

Implement controlled refund functionality.

For product returns:

- Select invoice
- Select product
- Return quantity
- Refund amount
- Return reason
- Refund method

For service refunds:

- Select invoice
- Select service
- Refund amount

- Reason

All refunds should be recorded in the system.

Inventory should be adjusted automatically for returned products where applicable.

22. Reports

Create a comprehensive Reports module.

Sales Reports

- Daily sales
- Weekly sales
- Monthly sales
- Custom date-range sales
- Service sales
- Product sales
- Staff-wise sales
- Customer-wise sales

Payment Reports

- Cash collection
- UPI collection
- Card collection
- Bank transfer
- Payment-method summary

Inventory Reports

- Current stock
- Low stock
- Stock movement
- Product sales
- Purchase report

Staff Reports

- Staff performance
- Services completed
- Revenue generated
- Commission earned

Expense Reports

- Daily expenses
- Monthly expenses
- Category-wise expenses

Profit Report

Calculate an estimated business profit using:

Profit = Sales Revenue – Product Cost – Expenses – Other Costs

Allow filtering by date range.

Reports should support:

- Search
- Filters
- Date range
- Print
- PDF export
- Excel export

23. Customer Loyalty / Membership

Optional module.

Support:

- Membership plans
- Membership validity
- Membership price
- Service discounts
- Product discounts
- Membership benefits
- Renewal

- Membership history

Optional loyalty points:

Points Earned = Configurable points based on purchase amount

Allow points redemption during billing.

24. Notifications

If notification integration is included, support:

- Appointment confirmation
- Appointment reminder
- Appointment cancellation
- Invoice notification
- Payment confirmation
- Promotional messages

Channels may include:

- WhatsApp
- SMS
- Email

Notifications should be configurable from settings.

25. User Authentication & Security

Implement:

- Secure login
- Logout
- Password change
- Forgot password
- Role-based access control
- Permission-based modules
- Session management
- Login activity

- Audit logs

Passwords must be stored using secure password hashing such as:

password_hash() / bcrypt / Argon2

Do not store plain-text passwords or MD5 passwords.

26. Audit Log

Track important system actions.

Example:

- User login
- User logout
- Invoice creation
- Invoice modification
- Invoice cancellation
- Product modification
- Stock adjustment
- Refund
- Expense creation
- User permission change

Store:

- User
 - Action
 - Module
 - Record ID
 - Date/time
 - IP address, where appropriate
-

27. Settings

Create a centralized settings module.

Settings should include:

Business Settings

- Parlour name
- Logo
- Address
- Phone
- Email
- Website
- GSTIN
- Currency
- Invoice prefix

Billing Settings

- Tax settings
- Discount settings
- Invoice numbering
- Rounding
- Payment methods

Notification Settings

- SMS
- Email
- WhatsApp

System Settings

- Date format
- Time format
- Currency format
- Backup settings

28. Database Requirements

Design a normalized relational database.

Suggested tables:

- users
- roles

- permissions
- customers
- staff
- service_categories
- services
- product_categories
- products
- suppliers
- purchases
- purchase_items
- appointments
- invoices
- invoice_items
- payments
- expenses
- expense_categories
- discounts
- commissions
- stock_movements
- memberships
- loyalty_points
- refunds
- notifications
- settings
- audit_logs

Define:

- Primary keys
- Foreign keys
- Indexes
- Unique constraints
- Created/updated timestamps
- Soft deletion where appropriate

29. Recommended Technology Stack

Build the system using a modern and maintainable architecture.

Recommended stack:

Backend

- PHP

Database

- MySQL

Frontend

- HTML5
- CSS3
- Bootstrap
- JavaScript
- AJAX
- jQuery where appropriate

PDF

- DomPDF or mPDF

Charts

- Chart.js

Optional

- WhatsApp API
 - Email SMTP
 - Barcode scanner
 - Thermal receipt printer
 - Excel export
-

30. UI/UX Requirements

The interface should be:

- Modern
- Clean
- Responsive
- Mobile-friendly

- Tablet-friendly
- Desktop optimized
- Easy for non-technical staff

The POS screen should prioritize speed.

Use:

- Large buttons
 - Clear typography
 - Service/product search
 - Keyboard-friendly navigation
 - Quick customer selection
 - Quick payment buttons
 - Confirmation dialogs
 - Toast notifications
 - Loading indicators
 - Validation messages
-

31. POS Workflow

The standard workflow should be:

Customer → Appointment/Walk-in → Service Selection → Staff Assignment → Product Selection → Discount → Tax → Payment → Invoice → Stock Update → Commission Calculation → Reports

Support two billing types:

Appointment Billing

Appointment

Customer Check-in

Service Completion

POS Billing

Payment

Invoice

Walk-in Billing

Walk-in Customer

Customer Registration/Selection

POS

Services/Products

Payment

Invoice
